Pain Management and Opioids: Balancing Risks and Benefits
CHAPTER 1

WELCOME
FACULTY INFORMATION

Karen Muchowski, MD, FAAFP

Private Practice
Graybill Medical Group
Temecula, CA

DISCLOSURE:
Dr. Muchowski and all staff involved with this content declare that neither they nor members of their immediate families have had financial relationships with the manufacturers of goods or services discussed, or corporate supporters of this event.
NO CO*RE PARTNER HAS ANY CONFLICTS OF INTEREST TO REPORT (APPENDIX 2)
NO CO*RE FACULTY HAS ANY CONFLICTS OF INTEREST TO REPORT (APPENDIX 2)
Presented by the California Academy of Family Physicians a member of the Collaborative for Risk Evaluation and Mitigation Strategy (REMS) Education (CO*RE), eleven interdisciplinary organizations working together to improve pain management and prevent adverse outcomes.

This educational activity is supported by an independent educational grant from the Opioid Analgesic REMS Program Companies. Please see this document for a listing of the member companies. This activity is intended to be fully compliant with the Opioid Analgesic REMS education requirements issued by the US Food and Drug Administration.
## PRODUCTS COVERED BY THIS REMS

### BRAND NAME PRODUCTS

- Arymo ER morphine sulfate ER tablets
- Avinza® morphine sulfate ER capsules
- Belbuca® buprenorphine buccal film
- Butrans® buprenorphine transdermal system
- Dolophine® methadone hydrochloride tablets
- Duragesic® fentanyl transdermal system
- Embeda® morphine sulfate/naltrexone ER capsules
- Exalgo® hydromorphone hydrochloride ER tablets
- Hysingla® ER hydrocodone bitartrate ER tablets
- Kadian® morphine sulfate ER capsules
- MorphaBond® morphine sulfate ER tablets
- MS Contin® morphine sulfate CR tablets
- Nucynta® ER tapentadol ER tablets
- Opana® ER oxymorphone hydrochloride ER tablets
- OxyContin® oxycodone hydrochloride CR tablets
- Targiniq™ ER oxycodone hydrochloride/naloxone hydrochloride ER tablets
- Troxyca ER oxycodone hydrochloride/naltrexone capsules
- Vantrela ER hydrocodone bitartrate ER tablets
- Xtampza ER oxycodone ER capsules
- Zohydro® hydrocodone bitartrate ER capsules

### GENERIC PRODUCTS

- Fentanyl ER transdermal systems
- Methadone hydrochloride tablets
- Methadone hydrochloride oral concentrate
- Methadone hydrochloride oral solution
- Morphine sulfate ER tablets
- Morphine sulfate ER capsules
- Oxycodone hydrochloride ER tablets
CHAPTER 2

WHY ARE WE HERE?
OPIOID DEATHS, TREATMENT ADMISSIONS AND PRESCRIBING

https://www.cdc.gov/mmwr/preview/mmwrhtml/mm6043a4.htm
OVERDOSE DEATHS INVOLVING OPIOIDS, U.S., 2000-2016

SOURCE: MMWR, January 1, 2016/64(50);1378-82
https://www.cdc.gov/drugoverdose/data/analysis.html
Rate of Opioid Related Overdose Deaths in Texas

Source: CDC WONDER

Deaths, Age Adjusted Rate per 100,000 Persons

1.7 1.8 2.6 3.4 3.6 3.7 3.9 4.6 4.3 3.9 4.6 4.4 4.6 4.4 4.4 4 4.3 4.7 4.9 13.3

Number of Opioid Related Overdose Deaths in Texas

Source: CDC WONDER

Drugs Involved in U.S. Overdose Deaths 2000-2016

20,100 deaths
fentanyl & fentanyl analogues

Fentanyl and Fentanyl Analogues

OD deaths from fentanyl and fentanyl analogues, such as carfentanil, have increased 540% in three years

Street fentanyl is illegally manufactured – generally NOT diverted pharmaceutical product

Two causes of fentanyl OD death: Opioid-induced respiratory depression and rigid chest wall syndrome; higher or repeated doses of naloxone required to reverse fentanyl overdose

Fentanyl has either contaminated or replaced all heroin across the U.S., also found in cocaine and methamphetamine

OPIOID PRESCRIBING – THE PENDULUM SWINGS

**PRESCRIBING BEHAVIORS**
- Under-Prescribing
- Over-Prescribing
- Appropriate Prescribing

**RESULTING OUTCOMES**
- Unresolved Pain
- Adverse Outcomes
- Adequate Analgesia
BENEFITS VS. RISKS

BENEFITS

• Analgesia
  - Adequate pain control
  - Continuous, predictable (with ER/LAs)
• Improved function
• Quality of life

RISKS

• Overdose, especially as ER/LA formulations contain more opioids than Immediate Release
• Life-threatening respiratory depression
• Abuse by patient or household contacts
• Misuse, diversion, and addiction
• Physical dependence and tolerance
• Interactions with other meds and substances
• Risk of neonatal opioid withdrawal syndrome
• Inadvertent exposure/ingestion by household contacts especially children
Source where pain relievers were obtained for most recent misuse among 12.5 million people aged 12 or older who misused prescription pain relievers in the past year: percentages, 2015

- 54% - Given by, bought from, or taken from a friend or relative
- 36% - Through a prescription or stolen from healthcare provider
- 5% - Bought from a dealer or stranger
- 5% - Some other way

FIRST SPECIFIC DRUG ASSOCIATED WITH INITIATION OF ILLICIT DRUG USE 2013

2.8 million initiates of illicit drugs

- 70.3% - Marijuana
- 12.5% - Pain Relievers
- 6.3% - Inhalants
- 5.2% - Tranquilizers
- 2.7% - Stimulants
- 2.6% - Hallucinogens
- 0.3% - Sedatives and Cocaine

REMS: RISK EVALUATION AND MITIGATION STRATEGY

• On July 9, 2012, the Food and Drug Administration (FDA) approved a Risk Evaluation and Mitigation Strategy (REMS) for extended-release (ER) and long-acting (LA) opioid medications.

• First time FDA has ever used accredited CE/CME as part of a REMS.
CO*RE STATEMENT

Misuse, abuse, diversion, addiction, and overdose of opioids has created a serious public health epidemic in the U.S.

When prescribed well and used as prescribed, opioids can be valuable tools to effectively treat pain.

This course does not advocate for or against the use of Immediate Release (IR) or Extended-Release/Long-Acting (ER/LA) opioids. Our purpose is to provide proper education about safe prescribing practices along with effective patient education.
LEARNING OBJECTIVES

- Accurately assess patients with pain for consideration of an opioid trial
- Establish realistic goals for pain management and restoration of function
- Initiate opioid treatment (IR and ER/LA) safely and judiciously, maximizing efficacy while minimizing risks
- Monitor and re-evaluate treatment continuously; discontinue safely when appropriate
- Counsel patients and caregivers about use, misuse, abuse, diversion, and overdose
- Educate patients about safe storage and disposal of opioids
- Demonstrate working knowledge and ability to access general and specific information about opioids, especially those used in your practice
You and Your Team *can* have an immediate and positive impact on this crisis while also caring for your patients appropriately.
CHAPTER 3

PAIN
THE NEUROPSYCHOBIOLOGY OF PAIN

1. Injury

2. Transmission along mixed fiber neurons (modulation occurs)

3. Transmission along spine up to brain (modulation occurs)

4. Perception in the brain (modulation occurs)
OPIOID SITES OF ACTION IN THE BRAIN
UNDERSTANDING PAIN

**Physiologic Stimulus**

- Nociceptive
- Neuropathic

**Biopsychosocial Context**

- Physical
  - Sleep/fatigue
  - Sympathetic arousal
  - Inflammatory status
  - Barometric pressure
  - Nutritional status
  - Work status
  - Relationships
  - Avocations
  - Secondary gain
  - Intimacy

- Psychological
  - Conditioning
  - Anxiety
  - Past disease experience
  - Catastrophizing
  - Resilience
  - ACEs
  - Grief
  - Depression

- Social
  - Finances
  - Values
  - Existential issues

- Spiritual
  - Religious faith
  - Meaning of illness
  - Suffering

**Experience of Pain**

- Peripheral neuropathy (neuritis)
- Post herpetic neuralgia
- Sympathetic dystrophy
- Thalamic injury
- Central hypersensitization

**Tissue injury**
- Mechanical abnormalities
- Inflammation
- Tissue invasion
- Tissue injury

**Physiologic Stimulus**

- Tissue injury
- Mechanical abnormalities
- Inflammation
- Tissue invasion
- Tissue injury

**Spiritual Context**

- Peripheral neuropathy (neuritis)
- Post herpetic neuralgia
- Sympathetic dystrophy
- Thalamic injury
- Central hypersensitization
THE IMPACT OF PAIN

- Sleep Disturbance
- Substance Misuse
- Secondary Physical Problems
- Functional Disabilities
- Anxiety Depression
- Cognitive Distortions
- Increased Stresses

CHRONIC PAIN
PAIN MANAGEMENT GOALS AND TREATMENT OPTIONS: A MULTI-MODAL APPROACH

COGNITIVE BEHAVIORAL THERAPY
- Behavioral Modification
- Meditation
- Cognitive Restructuring

INTERVENTIONAL TREATMENTS
- Nerve Blocks
- Steroid Injections
- Stimulators
- Trigger Point Injections

PHYSICAL
- Exercise
- Acupuncture
- Movement Therapies
- Manual Treatments

PHARMACOTHERAPY
- NSAIDS
- Antidepressants
- Opioids
- Cannabinoids
- Anticonvulsants
- Topicals (e.g., lidocaine)

Reduce Pain
Cultivate Well Being
Self Care
Provider Care
Restore Function
Quality of Life

Reduce Pain
Cultivate Well Being
Self Care
Provider Care
Restore Function
Quality of Life
• Explain neurophysiology of pain processing to patients
• When patients understand, their concerns are validated
• Pain has biological, psychological, social, and spiritual components
PAIN ASSESSMENT

DESCRIPTION OF PAIN

- Location
- Intensity
- Quality
- Onset/Duration
- Variations/Patterns/Rhythms

WHAT RELIEVES THE PAIN?

WHAT CAUSES OR INCREASES PAIN?

EFFECTS OF PAIN ON PHYSICAL, EMOTIONAL, AND PSYCHOSOCIAL FUNCTION

PATIENT’S CURRENT PAIN AND FUNCTION

TREATMENT HISTORY

NON-PHARMACOLOGIC STRATEGIES AND EFFECTIVENESS

PHARMACOLOGIC STRATEGIES AND EFFECTIVENESS

PAST USE

CURRENT USE

• Query state Prescription Drug Monitoring Program (PDMP) to confirm patient report
• Contact past providers and obtain prior medical records

DOSAGE

• For opioids currently prescribed: opioid, dose, regimen, and duration
  – Important to determine if patient is opioid tolerant

GENERAL EFFECTIVENESS
PAST MEDICAL HISTORY

ILLNESS RELEVANT TO (1) EFFECTS OR (2) METABOLISM OF OPIOIDS

1. Pulmonary disease, constipation, nausea, cognitive impairment
2. Hepatic, renal disease

ILLNESS POSSIBLY LINKED TO SUBSTANCE USE DISORDER (SUD):

• Hepatitis
• HIV
• Tuberculosis
• Cellulitis
• STIs
• Trauma/Burns
• Cardiac Disease
• Pulmonary Disease

OBTAIN A COMPLETE HISTORY OF CURRENT AND PAST SUBSTANCE USE

RISK FACTORS FOR OPIOID ABUSE

- Controlled medications: prescribed or non-prescribed
- Alcohol and tobacco
- History of sexual abuse
- Family history of substance abuse and psychiatric disorders
- Age (16-45 YO)

Substance abuse history does not prohibit treatment with ER/LA opioids but may require additional monitoring and expert consultation/referral

SOCIAL HISTORY

Employment, cultural background, social network, marital history, legal history, and other behavioral patterns
PHYSICAL EXAM AND ASSESSMENT

Seek objective confirmatory data

Order diagnostic tests (appropriate to complaint)

Components of patient evaluation for pain

General: vital signs, appearance, and pain behaviors

Musculoskeletal exam
- Inspection
- Gait and posture
- Range of motion
- Palpation
- Percussion
- Auscultation
- Provocative maneuvers

Neurologic exam

Cutaneous or trophic findings

Prior to opioid therapy

### SCORING (RISK)

- 0-3: low
- 4-7: moderate
- ≥8: high

SCREENER AND OPIOID ASSESSMENT FOR PATIENTS WITH PAIN (SOAPP)®

Identifies patients as high, moderate, or low risk for misuse of opioids prescribed for chronic pain

HOW IS SOAPP® ADMINISTERED?

Usually self-administered in waiting room, exam room, or prior to an office visit

May be completed as part of an interview with a nurse, physician, or psychologist

Prescribers should have a completed and scored SOAPP® while making opioid treatment decisions

The SOAPP® Version 1.0 Tutorial. https://painedu.org/soapp-tutorial_01.asp
SOAPP®: 4 FORMATS AVAILABLE TO ASSESS MISUSE RISK

<table>
<thead>

Opioids

Pain

Addiction
Opioids

WHAT IS THE RISK FOR MY PATIENT?

- Risk of opioid use disorder in patients on chronic opioid therapy (COT) for chronic non-cancer pain (CNCP) is up to 30%
- Always highest with past history of substance use disorder (SUD) or psychiatric comorbidity
- Recognize that patient needs and patterns shift with age

SOURCE: Boscarino, J. Journal of Addictive Diseases, 30:3,185-194
PAIN AND ADDICTION

PAIN – 5 A’S

Analgesia
Activities/Function
Aberrant Behavior
Adverse Effects
Affect

ADDICTION – 5 C’S

Control, loss of
Compulsive use
Craving drug
Continued use
Chronic problem
CONSIDER A TRIAL OF AN OPIOID?

- POTENTIAL BENEFITS ARE LIKELY TO OUTWEIGH RISKS
- FAILED TO ADEQUATELY RESPOND TO NON-OPIOID & NONDRUG INTERVENTIONS
- PAIN IS MODERATE TO SEVERE
- INITIATE TRIAL OF IR OPIOIDS

WHEN TO CONSIDER A TRIAL OF AN OPIOID

60-YR-OLD WITH CHRONIC DISABLING OA PAIN
• Non-opioid therapies not effective
• No psychiatric/medical comorbidity or personal/family drug abuse history
  – High potential benefits relative to potential risks
  – Could prescribe opioids to this patient in most settings with routine monitoring

30-YR-OLD WITH FIBROMYALGIA AND RECENT ALCOHOL USE DISORDER
• High potential risks relative to benefits (opioid therapy not first line for fibromyalgia)
• Requires intensive structure, monitoring, and management by clinician with expertise in both addiction & pain

Not a good candidate for opioid therapy

INITIATING OPIOIDS: CDC GUIDELINE (2016)

• Begin with IR
• Prescribe the lowest effective dosage
• Use caution at any dosage, but particularly when
  • Increasing dosage to ≥50 morphine milligram equivalents (MME)/day and carefully justify a decision to titrate dosage to ≥90 MME/day
• For acute pain, prescribe lowest effective dose of IRs, no more than needed
• Re-evaluate risks/benefits within 1 - 4 weeks of initiation or dose escalation
• Re-evaluate risks/benefits every 3 months; if benefits do not outweigh harms optimize other therapies, work to taper and discontinue
• Link to the Guideline:
  https://www.cdc.gov/drugoverdose/prescribing/providers.html

Cancer pain, hospice, and palliative care patients are not covered by CDC Guideline
INFORMED CONSENT

When initiating a trial of opioid analgesic therapy, confirm patient understanding of informed consent to establish:

ANALGESIC AND FUNCTIONAL GOALS OF TREATMENT

EXPECTATIONS

POTENTIAL RISKS

ALTERNATIVES TO OPIOIDS

HOW TO MANAGE
- Common Adverse Effects (AEs) (e.g., constipation, nausea, sedation)
- Risks (e.g., abuse, addiction, respiratory depression, overdose)
- AEs with long-term therapy (e.g., hyperalgesia, low testosterone, irregular menses or sexual dysfunction)
# PATIENT-PREScriBER AGREEMENT (PPA)

Document signed by both patient and prescriber at time an opioid is prescribed

<table>
<thead>
<tr>
<th><strong>CLARIFY TREATMENT PLAN AND GOALS OF TREATMENT WITH PATIENT, PATIENT’S FAMILY, AND OTHER CLINICIANS INVOLVED IN PATIENT’S CARE</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>ASSIST IN PATIENT EDUCATION</strong></td>
</tr>
<tr>
<td><strong>DISCUSS MEDICATION SAFE HANDLING, STORAGE, AND DISPOSAL</strong></td>
</tr>
<tr>
<td><strong>DOCUMENT PATIENT AND PRESCRIBER RESPONSIBILITIES</strong></td>
</tr>
</tbody>
</table>
PATIENT-PROVIDER AGREEMENT (PPA)

REINFORCE EXPECTATIONS FOR APPROPRIATE AND SAFE OPIOID USE

• One prescriber
• Consider one pharmacy
• Safeguard
  – Do not store in medicine cabinet
  – Keep locked (medication safe)
  – Do not share or sell
• Instructions for disposal when no longer needed
• Prescriber notification for any event resulting in a pain medication prescription

• Follow-up
• Monitoring
  – Random UDT and pill counts
• Refills
• Identify behaviors for discontinuation
• Exit strategy
Recognize and document aberrant drug-related behavior
  - In addition to patient self-report also use:
    • State PDMPs
    • UDT
      – Positive for non-prescribed drugs
      – Positive for illicit substance
      – Negative for prescribed opioid
  • Family member or caregiver interviews
  • Monitoring tools such as the COMM, PADT, PMQ, or PDUQ
  • Medication reconciliation (e.g., pill counts)
ADDRESS ABERRANT DRUG-RELATED BEHAVIOR

Behavior outside the boundaries of agreed-on treatment plan:

- Unsanctioned dose escalations or other noncompliance with therapy on 1 or 2 occasions
- Unapproved use of the drug to treat another symptom
- Openly acquiring similar drugs from other medical sources
- Multiple dose escalations or other noncompliance with therapy despite warnings
- Prescription forgery
- Obtaining prescription drugs from nonmedical sources

Any of these behaviors merit investigation, proceed with caution.
Adequately **DOCUMENT** all patient interactions, assessments, test results, and treatment plans.
CHAPTER 4 – PEARLS FOR PRACTICE

• Conduct a comprehensive and pain-focused history and physical
• Assess for risk of abuse and for mental health issues
• Determine if a therapeutic trial is appropriate
• Establish realistic goals for pain management and function
• Document EVERYTHING
CHALLENGE: THE EARLY REFILL

RED FLAG:
Is this misuse? Abuse?

Your patient requests an early refill for the second time in six months. Took extra medications for headache and again for toothache. Prescription is for lower back pain.

Action:
Evaluate potential misuse. Confirm patient’s understanding of each medication’s dosage, time of day, and maximum daily dose. Ask him/her to repeat these instructions back to you. Avoid clinical terms such as “prn”. Review treatment goals and expectations. Select and document a therapy plan that is compatible with patients’ individual needs, is safe, effective and balanced. Screen for risk with Current Opioid Misuse Measure (COMM) and, if indicated, refer to addiction specialist for treatment.
**CHALLENGE: THE DELAYED SURGERY**

**RED FLAG:**
Patient may be stalling to continue an opioid regimen

Ms. Jones says she needs opioids to manage her pain until she can have surgery. She reports continued delays in getting to surgery. You phone the surgeon and discover that no date has been set and that she has cancelled several appointments.

**Action:**
Set a time limit and expectation. Offer non-pharmacologic methods and non-opioid interventions for pain management. Communicate with the surgeon and advise patient to make appointment with surgeon for discussion of treatment plan.
CHAPTER 5

MANAGEMENT
MONITORING AND DISCONTINUING
PART 1

MONITORING
OPIOID SIDE EFFECTS

- Respiratory depression – most serious
- Opioid-Induced Constipation (OIC) – most common
- Sedation, cognitive impairment
- Falls and fractures
- Sweating, miosis, urinary retention
- Hypogonadism
- Tolerance, physical dependence, hyperalgesia
- Addiction in vulnerable patients

Prescribers should report serious AEs to the FDA:
www.fda.gov/downloads/AboutFDA/ReportsManualsForms/Forms/UCM163919.pdf
or 1-800-FDA-1088
## OPIOID-INDUCED RESPIRATORY DEPRESSION

<table>
<thead>
<tr>
<th>Chief hazard of opioid agonists, including ER/LA opioids</th>
</tr>
</thead>
<tbody>
<tr>
<td>- If not immediately recognized and treated, may lead to respiratory arrest and death</td>
</tr>
<tr>
<td>- Greatest risk: initiation of therapy or after dose increase</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Manifested by reduced urge to breathe and decreased respiration rate</th>
</tr>
</thead>
<tbody>
<tr>
<td>- Shallow breathing</td>
</tr>
<tr>
<td>- CO₂ retention can exacerbate opioid sedating effects</td>
</tr>
</tbody>
</table>

<table>
<thead>

<tr>
<td>- Close observation</td>
</tr>
<tr>
<td>- Supportive measures</td>
</tr>
<tr>
<td>- Opioid antagonists</td>
</tr>
<tr>
<td>- Depending on patient’s clinical status</td>
</tr>
</tbody>
</table>

## OPIOID-INDUCED RESPIRATORY DEPRESSION

### MORE LIKELY TO OCCUR

- In elderly, cachectic, or debilitated patients
  - Contraindicated in patients with respiratory depression or conditions that increase risk
- If given concomitantly with other drugs that depress respiration
- Patients who are opioid-naïve or have just had a dose increase

### REDUCE RISK

- Proper dosing and titration are essential
- **Do not overestimate** dose when converting dosage from another opioid product
  - Can result in fatal overdose with first dose
- Instruct patients to swallow tablets/capsules whole
  - Dose from cut, crushed, dissolved, or chewed tablets/capsules may be fatal, particularly in opioid-naïve individuals
WHEN TO MOVE FROM IR TO ER/LA OPIOIDS

<table>
<thead>
<tr>
<th>PRIMARY REASONS</th>
<th>OTHER POTENTIAL REASONS</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Maintain stable blood levels (steady state plasma)</td>
<td>• Patient desire or need to try a new formulation</td>
</tr>
<tr>
<td>• Longer duration of action</td>
<td>• Cost or insurance issues</td>
</tr>
<tr>
<td>• Multiple IR doses needed to achieve effective analgesia</td>
<td>• Adherence issues</td>
</tr>
<tr>
<td>• Poor analgesic efficacy despite dose titration</td>
<td>• Change in clinical status requires an opioid with different pharmacokinetics</td>
</tr>
<tr>
<td>• Less sleep disruption</td>
<td>• Problematic drug-drug interactions</td>
</tr>
</tbody>
</table>

Patient desire or need to try a new formulation
Cost or insurance issues
Adherence issues
Change in clinical status requires an opioid with different pharmacokinetics
Problematic drug-drug interactions
CONSIDERATIONS FOR CHANGE FROM IR TO ER/LA OPIOIDS

**DRUG AND DOSE SELECTION IS CRITICAL**

Some ER/LA opioids or dosage forms are only recommended for opioid-tolerant patient
- ANY strength of transdermal fentanyl or hydromorphone ER
- Certain strengths/doses of other ER/LA products (check drug prescribing information)

**MONITOR PATIENTS CLOSELY FOR RESPIRATORY DEPRESSION**

Especially within 24-72 hours of initiating therapy and increasing dosage

**INDIVIDUALIZE DOSAGE BY TITRATION BASED ON EFFICACY, TOLERABILITY, AND PRESENCE OF AEs**

Check ER/LA opioid product PI for minimum titration intervals
Supplement with IR analgesics (opioids and non-opioid) if pain is not controlled during titration

---

Patients considered opioid tolerant are taking at least:
- 60 mg oral morphine/day
- 25 mcg transdermal fentanyl/hour
- 30 mg oral oxycodone/day
- 8 mg oral hydromorphone/day
- 25 mg oral oxymorphone/day
- An equianalgesic dose of another opioid

Still requires caution when rotating a patient on an IR opioid to a different ER/LA opioid.

FOR 1 WEEK OR LONGER
OPIOID ROTATION

DEFINITION

Change from an existing opioid regimen to another opioid with the goal of improving therapeutic outcomes or to avoid AEs attributed to the existing drug (e.g., myoclonus)

RATIONALE

Differences in pharmacologic or other effects make it likely that a switch will improve outcomes

• Effectiveness and AEs of different mu opioids vary among patients
• Patients show incomplete cross-tolerance to new opioid
  – Patient tolerant to first opioid can have improved analgesia from second opioid at a dose lower than calculated from an Equianalgesic Dosing Table (EDT)

EQUIANALGESIC DOSE TABLES (EDT)

Many different versions:

- PUBLISHED
- ONLINE
- ONLINE INTERACTIVE
- SMART-PHONE APPS

Vary in terms of:

- EQUIANALGESIC VALUES
- WHETHER RANGES ARE USED

**Which opioids are included:** May or may not include transdermal opioids, rapid-onset fentanyl, ER/LA opioids, or opioid agonist-antagonists
**EXAMPLE OF AN EDT FOR ADULTS**

*75%-90% reduction for methadone

Calculate equianalgesic dose of new opioid from EDT
GUIDELINES FOR OPIOID ROTATION (continued)

IF SWITCHING TO METHADONE:

• Standard EDTs are less helpful in opioid rotation to methadone
• In opioid tolerant patients, methadone doses should not exceed 30-40 mg/day upon rotation
  - Consider inpatient monitoring, including serial EKG monitoring
• In opioid-naïve patients, methadone should not be given as an initial drug

IF SWITCHING TO TRANSDERMAL:

• Fentanyl, calculate dose conversion based on equianalgesic dose ratios included in the PI
• Buprenorphine, follow instructions in the PI
GUIDELINE FOR OPIOID ROTATION: SUMMARY

VALUES FROM EDT*

Value of Current Opioid

Value of New Opioid

PATIENT OPIOID VALUES

24 Hr Dose of Current Opioid

X Amount of New Opioid

“SOLVE” FOR X

Equianalgesic 24 Hr Dose of New Opioid

AUTOMATICALLY REDUCE DOSE

By 25%-50%†

Frequently assess initial response

Titrate dose of new opioid to optimize outcomes

Calculate supplemental rescue dose used for titration at 5%-15% of total daily dose‡

* If switching to transdermal fentanyl, use equianalgesic dose ratios provided in PI
† If switching to methadone, reduce dose by 75%-90%
‡ If oral transmucosal fentanyl used as rescue, begin at lowest dose irrespective of baseline opioid
## BREAKTHROUGH PAIN (BTP)

### PATIENTS ON STABLE ATC OPIOIDS MAY EXPERIENCE BTP
- Disease progression or a new or unrelated pain
  - Target cause or precipitating factors
- Dose for BTP: using an IR is 5%-15% of total daily opioid dose, administered at an appropriate interval
- Never use ER/LA for BTP

### CONSIDER ADDING
- PRN IR opioid trial based on analysis of benefit versus risk
  - Risk for aberrant drug-related behaviors
  - High-risk: only in conjunction w/ frequent monitoring & follow-up
  - Low-risk: w/ routine follow-up & monitoring
- Non-opioid drug therapies
- Non-pharmacologic treatments

**ATC = Around the Clock**
BE READY TO REFER

SUBSTANCE USE DISORDER

SAMHSA substance abuse treatment facility locator

SAMHSA mental health treatment facility locator

https://findtreatment.samhsa.gov/locator/home

HIGH-RISK/COMPLEX PATIENTS

Refer to pain management, check state regulations for requirements

SAMHSA = Substance Abuse and Mental Health Service Administration
RATIONALE FOR URINE DRUG TESTING (UDT)

- Urine testing is done **FOR** the patient not **TO** the patient
- Help to identify drug misuse/addiction
- Assist in assessing and documenting adherence

UDT FREQUENCY IS BASED ON CLINICAL JUDGMENT AND STATE REGULATIONS
TYPES OF UDT METHODS

Be aware of what you are testing and not testing

IMMUNOASSAY (IA) DRUG PANELS

- Either lab-based or point of care
- Identify substance as present or absent according to cutoff
- Many do not identify individual drugs within a class
- Subject to cross-reactivity and variability

GC/MS OR LC/MS

- Identify the presence and quantity of substance(s)
- Identify drugs not included in IA tests
- When results are contested

GC/MS=gas chromatography/mass spectrometry - LC/MS=liquid chromatography/mass spectrometry

SPECIFIC WINDOWS OF DRUG DETECTION

How long a person excretes drug and/or metabolite(s) at a concentration above a cutoff

DETECTION TIME OF DRUGS IN URINE

Governed by various factors; e.g., dose, route of administration, metabolism, fat solubility, urine volume and pH

For most drugs it is 1-3 days

Chronic use of lipid-soluble drugs increases detection time; e.g., marijuana, diazepam, ketamine
# SPECIFIC WINDOWS OF DRUG DETECTION

Source: [http://www.fda.gov/MedicalDevices/ProductsandMedicalProcedures/InVitroDiagnostics/DrugsofAbuseTests/ucm125722.htm](http://www.fda.gov/MedicalDevices/ProductsandMedicalProcedures/InVitroDiagnostics/DrugsofAbuseTests/ucm125722.htm)
URINE SPECIMEN INTEGRITY

SPECIMEN COLOR RELATED TO CONCENTRATION
Concentrated samples more reliable than dilute samples

TEMP WITHIN 4 MINUTES OF VOIDING IS 90-100°F

PH FLUCTUATES WITHIN RANGE OF 4.5-8.0

CREATINININE VARIES WITH HYDRATION

| Normal urine: >20 mg/dL | Dilute: creatinine <20 mg/dL and specific gravity <1.003 | Creatinine <2 mg/dL not consistent with human urine |
INTERPRETATION OF UDT RESULTS

POSTIVE RESULT

Demonstrates recent use
• Most drugs in urine have detection times of 1-3 days
• Chronic use of lipid-soluble drugs: test positive for ≥1 week

Does not diagnose
• Drug addiction, physical dependence, or impairment
Does not provide enough information to determine
• Exposure time, dose, or frequency of use

NEGATIVE RESULT

Does not diagnose diversion
• More complex than presence or absence of a drug in urine

May be due to maladaptive drug-taking behavior
• Binging, running out early
• Other factors: e.g., cessation of insurance, financial difficulties
EXAMPLES OF METABOLISM OF OPIOIDS

CODEINE → MORPHINE → (6-MAM*) → HEROIN

T½ = 25-30 MIN
T½ = 3-5 MIN

HYDROCODONE → HYDROMORPHONE

OXYCODONE → OXYMORPHONE

*6-MAM = 6-MONOACETYL MORPHINE
CHALLENGE: THE OFFENDED PATIENT

RED FLAG:
You decide not to request routine risk assessment for fear of creating conflict

Mrs. Lane and her family have been your patients for years. She has chronic headache and back pain treatment. When you ask her to take a UDT, she becomes upset and accuses you of not trusting her. You decide against further risk assessments because you are concerned about damaging the relationship.

Action:
Require all patients receiving opioids to follow a treatment plan and adhere to defined expectations. Create office policy for performing UDT for patients receiving opioids beyond two weeks. Practice universal precautions. Explain to patient that you must meet the standards of care that include evaluation of risk in all patients, use of PPAs, and other tools.
PART 2

DISCONTINUING
REASONS FOR DISCONTINUING OPIOIDS

PAIN LEVEL DECREASES IN STABLE PATIENTS

INTOLERABLE AND UNMANAGEABLE AEs

NO PROGRESS TOWARD THERAPEUTIC GOALS

MISUSE

- 1 or 2 episodes of increasing dose without prescriber knowledge
- Sharing medications
- Unapproved opioid use to treat another symptom (e.g., insomnia)

ABERRANT BEHAVIORS

- Use of illicit drugs or unprescribed opioids
- Repeatedly obtaining opioids from multiple outside sources
- Prescription forgery
- Multiple episodes of prescription loss
- Diversion
TAPER DOSE WHEN DISCONTINUING

Minimize withdrawal symptoms in opioid-dependent patient, consider medications to assist with withdrawal

May use a range of approaches from slow 10% dose reduction per week to more rapid 25%-50% reduction every few days

If opioid use disorder or a failed taper, refer to addiction specialist or consider opioid agonist therapy

Counseling and relaxation strategies needed
CHAPTER 5 – PEARLS FOR PRACTICE

- Establish informed consent and PPA at the beginning
- Educate the whole team: patients, families, caregivers
- Refer if necessary
- Anticipate opioid-induced respiratory depression and constipation
- Follow patients closely during times of dose adjustments
- Periodically evaluate functional outcomes
- Discontinue opioids slowly and safely
CHALLENGE: IS THIS A LAB ERROR?

RED FLAG:
The questionable Urine Drug Test

Donald has been prescribed oxycodone for six months to treat back pain. His UDT at six months comes back negative in all areas. He tells you that he is taking his meds.

Action:
Do not discharge the patient as the first action. Contact the lab and discuss the test and any metabolite or specimen integrity issues. Ask: Is this the right lab test? Repeat the UDT and document everything. Discuss with the patient.
CHALLENGE: PATIENTS WHO ARE NOT WHO THEY APPEAR

RED FLAG:
Patient wants to control their pill mg dose and taper plan

Tom has back pain. He is managed by taking oxycodone (40 mg BID) but wants to decrease his dose when he can, thus he requests only 20 mg pills. He often brings in unused meds to show how he is trying to reduce his dose. He resists any change.

Action:
Do not allow patient to taper on their own. Create an endpoint for the taper. See patient once a week with a seven-day supply for the tapering until they are off opioids. Document teaching, patient’s comments about the plan, UDT, pill counts, non-pharmacological modalities for pain management, and their adherence to this plan.
OLDER ADULTS

RISK FOR RESPIRATORY DEPRESSION

- Age-related changes in distribution, metabolism, excretion; absorption less affected

MONITOR

- Initiation and titration
- Concomitant medications (polypharmacy)
- Falls risk, cognitive change, psychosocial status
- Reduce starting dose to 1/3 to 1/2 the usual dosage in debilitated, non-opioid-tolerant patients
- Start low, go slow, but GO
- Patient and caregiver reliability/risk of diversion

ROUTINELY INITIATE A BOWEL REGIMEN

WOMEN WITH CHILDBEARING POTENTIAL

KNOW THE REPRODUCTIVE PLANS AND PREGNANCY STATUS OF YOUR PATIENTS

• 40% of women with childbearing potential are prescribed opioids
• Opioid exposure during pregnancy causes increased risk for fetus
• Most women do not know they are pregnant in first few weeks
• Therefore all women of childbearing age are at risk
• No adequate nor well-controlled studies of opioids for pain in pregnancy

THE PREGNANT PATIENT

Potential risk of opioid therapy to the newborn is neonatal opioid withdrawal syndrome

GIVEN THESE POTENTIAL RISKS, CLINICIANS SHOULD:

- Counsel women of childbearing potential about risks and benefits of opioid therapy during pregnancy and after delivery
- Encourage minimal/no opioid use during pregnancy, unless potential benefits outweigh risks to fetus
- Refer to a high risk OB/Gyn who will ensure appropriate treatment for the baby

If chronic opioid therapy is used during pregnancy, anticipate and manage risks to the patient and newborn

If using opioids on a daily basis, consider methadone or buprenorphine

CHILDREN AND ADOLESCENTS: HANDLE WITH CARE

JUDICIOUS USE OF IR FOR BRIEF THERAPY

SAFETY AND EFFECTIVENESS OF MOST ER/LA OPIOIDS UNESTABLISHED

- Pediatric analgesic trials pose challenges
- Transdermal fentanyl approved in children aged ≥2 yrs
- Oxycodone ER dosing changes for children ≥11 yrs

ER/LA OPIOID INDICATIONS ARE PRIMARILY LIFE-LIMITING CONDITIONS

WHEN PRESCRIBING ER/LA OPIOIDS TO CHILDREN:

- Consult pediatric palliative care team or pediatric pain specialist or refer to a specialized multidisciplinary pain clinic

CHALLENGE: VULNERABILITY IN CO-DEPENDENT OLDER ADULTS

RED FLAG:

Questionable family diversion

78-year-old Thelma comes into clinic, accompanied by grandson, who is in the exam room with you and Thelma. Thelma says her oxycodone 10 mg tablets q 4 hours is no longer working for her back pain. She asks for more medicine. You ask grandson to leave the exam room so you can examine her privately.

**Action:** Based on exam findings and her request for more medication:
- UDT and PDMP check
- Discuss whether or not it is possible her grandson, or another family member, might be using her medications.
- Patient education: Do not give opioids to another person. Store in secure place – locked. Let you know if medications are not secure or if she feels any pressure about sharing medications.
CHAPTER 7

KNOW YOUR FEDERAL AND STATE LAWS
FEDERAL AND STATE REGULATIONS

Comply with federal and state laws and regulations that govern the use of opioid therapy for pain

**FEDERAL**

- Code of Federal Regulations, Title 21 Section 1306: rules governing the issuance and filling of prescriptions pursuant to section 309 of the Act (21 USC 829)
  
  www.deadiversion.usdoj.gov/21cfr/cfr/2106cfrt.htm

- United States Code (USC) - Controlled Substances Act, Title 21, Section 829: prescriptions
  
  www.deadiversion.usdoj.gov/21cfr/21usc/829.htm

**STATE**

- Database of state statutes, regulations, and policies for pain management
  
  www.medscape.com/resource/pain/opioid-policies

  www.painpolicy.wisc.edu/database-statutes-regulations-other-policies-pain-management
PRESCRIPTION DRUG MONITORING PROGRAMS (PDMPs)

INDIVIDUAL STATE LAWS DETERMINE

- Who has access to PDMP information
- Which drug schedules are monitored
- Which agency administers the PDMP
- Whether prescribers are required to register with the PDMP
- Whether prescribers are required to access PDMP information in certain circumstances
- Whether unsolicited PDMP reports are sent to prescribers
- Bordering states may be available
- Designated surrogates may have access

NOT ALL FEDERALLY LICENSED FACILITIES REPORT TO PDMPs

Link to state PDMP sites
PDMP: Prescription Drug Monitoring Program

**General**
- **Texas Prescription Monitoring Program**
  https://www.pharmacy.texas.gov/PMP/
- Administered by the **Board of Pharmacy**
- **Schedule II-V** are monitored
- **Dispensers and prescribers are required** to register and input data
- Before prescribing, there is **no obligation** to review under certain circumstances (will be required effective 9/1/2019)
- Prescribers **can authorize** a registered delegate

**Reporting**
- Must be entered into PDMP by **next business day** after dispensing
- Unsolicited reports/alerts are **sent** to prescribers and dispensers only
- Texas **does share** data with other states’ PDMP
- Out-of-state pharmacies **are required** to report to the patient’s home state
- Patient **will not be notified** if their record has been accessed

---

© 2017 The National Alliance for Model State Drug Laws (NAMSDL)
There is evidence that cannabis or selective cannabinoids (cannabidiol) are effective for chronic pain treatment in adults. More research is needed. Concern for high risk groups: children, adolescents, pregnant women.

CONSIDERATIONS FOR CLINICIANS

• Use available scientific evidence, advise patients
  - Inform about potential effects; AEs mostly mild and well tolerated (cough, anxiety)
  - Screen for potential misuse/abuse, diversion
• Set treatment goals, use PPA
• Encourage patients to keep notes, discuss with them
• Document everything
• Regular re-evaluation
• Consider periodic UDTs
• Discontinue if not helpful moving toward goals
• Edibles are the fastest growing delivery system
• No well controlled studies on the combined use of opioids and cannabis

CHALLENGE: THE HIGH RISK PATIENT

RED FLAG:

**Proceed with caution, but treat the high risk patient**

18-year-old with a recurrent wound in the antecubital fossa secondary to intravenous injection. This is her third wound debridement and she is in more pain than before. She tells you if she cannot get relief from you, she will go to the street for meds.

**Action:**

With a drug abuse history, proceed with caution and use extra safety measures. Patient may require admission to either hospital or treatment facility while managing pain. This history does not mean you should discharge or avoid treating the patient’s pain.
USE PATIENT COUNSELING DOCUMENT

DOWNLOAD:

ORDER HARD COPIES:
www.minneapolis.cenveo.com/pcd/SubmitOrders.aspx

## COUNSEL PATIENTS ABOUT PROPER USE

### EXPLAIN

- Product-specific information about the IR or ER/LA opioid (especially when converting)
- Take opioid as prescribed
- Adhere to dose regimen
- How to handle missed doses
- Notify prescriber if pain not controlled
- Call prescriber for options on side effect management

### INSTRUCT PATIENTS/CAREGIVERS TO

- Read the ER/LA opioid **Medication Guide** received from pharmacy **every time** an ER/LA opioid is dispensed
COUNSEL PATIENTS ABOUT PROPER USE (continued)

EXPLAIN

- Inform prescriber of ALL meds being taken
- Warn patients not to abruptly discontinue or reduce dose
- Risk of falls
- Caution with operating heavy machinery and when driving
- Sharing or selling opioids can lead to others’ deaths and is against the law

OPIOIDS CAN CAUSE DEATH EVEN WHEN TAKEN PROPERLY

- Signs/symptoms are respiratory depression, gastrointestinal obstruction, allergic reactions
COUNSEL PATIENTS ABOUT PROPER USE (continued)

EXPLAIN

- Tell patients and caregivers, medications must be kept in a locked container
- Will periodically assess for benefits, side effects, and continued need for IR/ER/LA opioids
- Need for re-evaluation of underlying medical condition if the clinical presentation changes over time

OPIOIDS SHOULD BE STORED IN A SAFE AND SECURE PLACE

- Away from children, family members, visitors, and pets
- Safe from theft

Opioids are scheduled under Controlled Substances Act and can be misused and abused
WARN PATIENTS

Never break, chew, crush, or snort an oral ER/LA tablet/capsule, or cut or tear patches prior to use
  • May lead to rapid release of ER/LA opioid causing overdose and death
  • If unable to swallow a capsule whole, refer to PI to determine if appropriate to sprinkle contents on applesauce or administer via feeding tube

Use of CNS depressants or alcohol with ER/LA opioids can cause overdose & death
  • Use with alcohol may result in rapid release and absorption of a potentially fatal opioid dose – “dose dumping”
  • Other depressants include sedative-hypnotics and anxiolytics, illegal drugs
OVERDOSE POISONING, CALL 911

- Person cannot be aroused or awakened or is unable to talk
- Any trouble with breathing, heavy snoring is warning sign
- Gurgling noises coming from mouth or throat
- Body is limp, seems lifeless; face is pale, clammy
- Fingernails or lips turn blue/purple
- Slow, unusual heartbeat or stopped heartbeat
NALOXONE

Naloxone:
• An opioid antagonist administered by injection or intranasally, or IV
• Reverses acute opioid-induced respiratory depression but will also reverse analgesia

Available as:
• Naloxone kit (with syringes, needles)
• Injectable
• Nasal spray

What to do:
• Discuss an ‘overdose plan’
• Involve and train family, friends, partners, and/or caregivers
• Check with pharmacy if they are prescribing
• Check expiration dates and keep a viable dose on hand
• In the event of known or suspected overdose, administer naloxone and call 911

Consider offering a naloxone prescription to all patients prescribed IR and ER/LA opioids

## Naloxone Regulation

**Effective date**: September 2015

### Criminal Immunity
- Prescribers: **Yes**
- Dispensers: **Yes**
- Lay People: **Yes**

### Also Available
- Without Prescription: **Yes**
- To 3rd Party: **Yes**
- By Standing Order: **Yes**

### Carried by First Responders
- **Yes**
TALK WITH YOUR PATIENTS WHO ARE PARENTS

• Consider the behavior you are modeling
• 45% of parents have taken pain medications without a prescription at some point
• 14% have given their children pain medications without a prescription
• Teens report that their parents do not talk with them about prescription drug risks
  • Evidence suggests that pre-college parental conversation helps reduce high-risk substance abuse among college students

### SUBSTANCES PARENTS HAVE DISCUSSED WITH TEENS*

*As reported by teens

<table>
<thead>
<tr>
<th>Substance</th>
<th>% of teens whose parents have discussed</th>
</tr>
</thead>
<tbody>
<tr>
<td>Beer/alcohol</td>
<td>81%</td>
</tr>
<tr>
<td>Marijuana</td>
<td>77%</td>
</tr>
<tr>
<td>Cocaine/crack</td>
<td>30%</td>
</tr>
<tr>
<td>Rx pain reliever w/o doctor's Rx</td>
<td>23%</td>
</tr>
<tr>
<td>Any Rx drug used w/o doctor's Rx</td>
<td>22%</td>
</tr>
<tr>
<td>Heroin</td>
<td>21%</td>
</tr>
<tr>
<td>Ecstasy</td>
<td>21%</td>
</tr>
<tr>
<td>Methamphetamine</td>
<td>21%</td>
</tr>
<tr>
<td>Non-Rx cold/cough medicine to get high</td>
<td>15%</td>
</tr>
<tr>
<td>Steroids w/o doctor's Rx</td>
<td>15%</td>
</tr>
<tr>
<td>Inhalants</td>
<td>14%</td>
</tr>
</tbody>
</table>

*As reported by teens.*
REMEMBER...

STEP 1: MONITOR
• Note how many pills in each prescription
• Keep track of dosage and refills
• Make sure everyone in the home knows

STEP 2: SECURE
• Keep meds in a safe place (locked cabinet)
• Encourage parents of your teen’s friends to secure their prescriptions

STEP 3: DISPOSE
• Discard expired or unused meds
• Consult PI for best disposal

AAP News, Pediatrics February 2017
RX OPIOID DISPOSAL

New “Disposal Act” expands ways for patients to dispose of unwanted/expired opioids

**DECREASES AMOUNT OF OPIOIDS INTRODUCED INTO THE ENVIRONMENT, PARTICULARLY INTO WATER**

### Collection receptacles
Call DEA Registration Call Center at **1-800-882-9539** to find a local collection receptacle

### Mail-back packages
Obtained from authorized collectors

### Look for local take-back events
- Conducted by Federal, State, tribal, or local law enforcement
- Partnering with community groups

**Voluntarily maintained by:**
- Law enforcement
- Authorized collectors, including:
  - Manufacturer
  - Distributor
  - Reverse distributor
  - Retail or hospital/clinic pharmacy
    - Including long-term care facilities

OTHER METHODS OF OPIOID DISPOSAL

- Take drugs out of original containers
- Mix with undesirable substance
- Place in sealable bag, can, or other container
- Remove identifying info on label

Source: https://www.fda.gov/Drugs/ResourcesForYou/Consumers/BuyingUsingMedicineSafely/EnsuringSafeUseofMedicine/SafeDisposalofMedicines/ucm186187.htm#Flush_List
FDA: PRESCRIPTION DRUG DISPOSAL

As soon as they are no longer needed
Includes transdermal adhesive skin patches
  - Used patch (3 days) still contains enough opioid to harm/kill a child
  - Dispose of used patches immediately after removing from skin
Fold patch in half so sticky sides meet, then flush down toilet
Do NOT place used or unneeded patches in household trash
  - Butrans (buprenorphine transdermal system) exception: can seal in Patch-Disposal Unit provided and dispose of in the trash

FLUSH DOWN SINK/TOILET IF NO COLLECTION RECEPTACLE, MAIL-BACK PROGRAM, OR TAKE-BACK EVENT AVAILABLE
CHAPTER 8 – PEARLS FOR PRACTICE

• Use formal tools (PPAs, counseling document) to educate patients and caregivers
• Emphasize safe storage and disposal to patients and caregivers
• Consider co-prescribing naloxone
CHALLENGE: THE DAUGHTER’S PARTY

RED FLAG:
Patients do not safeguard their opioid medications correctly

Your patient’s daughter stole her father’s opioids from his bedside drawer to take to a “fishbowl party.” Her best friend consumed a mix of opioids and alcohol and died of an overdose.

Action:
Always counsel patients about safe drug storage; warn patients about the serious consequences of theft, misuse, and overdose. Tell patients that taking another person’s medication, even once, is against the law.
### FOR SAFER USE: KNOW DRUG INTERACTIONS, PK, AND PD

<table>
<thead>
<tr>
<th>CNS depressants can potentiate sedation and respiratory depression</th>
</tr>
</thead>
</table>
| Use with MAOIs may increase respiratory depression  
  Certain opioids with MAOIs can cause serotonin syndrome |
| Methadone and buprenorphine can prolong QTc interval |
| Some ER/LA products rapidly release opioid (dose dump)  
  when exposed to alcohol  
  Some drug levels may increase without dose dumping |
| Can reduce efficacy of diuretics  
  Inducing release of antidiuretic hormone |
| Drugs that inhibit or induce CYP enzymes can increase or lower blood levels of some opioids |
TRANSDERMAL/TRANSMUCOSAL DOSAGE FORMS

Do not cut, damage, chew, or swallow

- Exertion or exposure to external heat can lead to fatal overdose
- Rotate location of application
- Prepare skin: clip (not shave) hair & wash area with water
- Monitor patients with fever for signs or symptoms of increased opioid exposure
- Metal foil backings are not safe for use in MRIs
- For buccal film products the film should not be applied if it is cut, damaged, or changed in anyway -- use entire film
### DRUG INTERACTIONS COMMON TO OPIOIDS

| Concurrent use with other CNS depressants can increase risk of respiratory depression, hypotension, profound sedation, or coma | Avoid concurrent use of partial agonists* or mixed agonist/antagonists† with full opioid agonist |
| Reduce initial dose of one or both agents | May reduce analgesic effect and/or precipitate withdrawal |

| May enhance neuromuscular blocking action of skeletal muscle relaxants and increase respiratory depression | Concurrent use with anticholinergic medication increases risk of urinary retention and severe constipation |
| May lead to paralytic ileus |

*Buprenorphine; †Pentazocine, nalbuphine, butorphanol
DRUG INFORMATION COMMON TO OPIOIDS

USE IN OPIOID-TOLERANT PATIENTS

- See individual PI for products which:
  - Have strengths or total daily doses only for use in opioid-tolerant patients
  - Are only for use in opioid-tolerant patients at all strengths

CONTRAINDICATIONS

- Significant respiratory depression
- Acute or severe asthma in an unmonitored setting or in absence of resuscitative equipment
- Known or suspected paralytic ileus
- Hypersensitivity (e.g., anaphylaxis)
- See individual PI for additional contraindications
SPECIFIC CHARACTERISTICS

Know for opioid products you prescribe:

Specific information about product conversions, if available

Specific drug interactions

For detailed information, refer to online PI:
SUMMARY

Prescription opioid abuse and overdose is a national epidemic. *Clinicians must play a role in prevention.*

- Assess patients for treatment with IR and ER/LA opioids
- Counsel patients and caregivers about the safe use of opioids, including proper storage and disposal
- Be familiar with general and product-specific drug information concerning opioids
- Initiate therapy, modify dose, and discontinue use of opioids
- Monitor ongoing therapy with IR and ER/LA opioids
Our session stops here, but your review continues...

Refer to Appendix 1 for specific drug information on ER/LA opioid analgesic products

For detailed information, prescribers can refer to prescribing information available online via DailyMed at www.dailymed.nlm.nih.gov or Drugs@FDA at www.fda.gov/drugsatfda
Thank you for completing the post-activity assessment for this CO*RE session.

Your participation in this assessment allows CO*RE to report de-identified numbers to the FDA. A strong show of engagement will demonstrate that clinicians have voluntarily taken this important education and are committed to patient safety and improved outcomes.

THANK YOU!
THANK YOU!

WWW.CORE-REMS.ORG
Appendix 1. Drug Specific Slides
Morphine Sulfate ER Tablets (Arymo ER)

Capsules 15 mg, 30 mg, 60 mg

<table>
<thead>
<tr>
<th>Dosing interval</th>
<th>• Every 8 or 12 hours</th>
</tr>
</thead>
</table>
| Key instructions | • Initial dose in opioid-naïve and opioid non-tolerant patients is 15 mg every 8 or 12 hours  
• Dosage adjustment may be done every 1 to 2 days.  
• Take one tablet at a time, with enough water to ensure complete swallowing immediately after placing in the mouth |
| Drug interactions | • P-gp inhibitors (e.g. quinidine) can increase the exposure of morphine by about two-fold and increase risk of respiratory depression |
| Opioid-tolerant | • A single dose of ARYMO ER greater than 60 mg, or total daily dose greater than 120 mg, is for use in opioid-tolerant patients only. |
| Product-specific safety concerns | • Do not attempt to chew, crush, or dissolve. Swallow whole.  
• Use with caution in patients who have difficulty in swallowing or have underlying GI disorders that may predispose them to obstruction, such as a small gastrointestinal lumen. |
# Morphine Sulfate ER Capsules (Avinza)

Capsules 30 mg, 45 mg, 60 mg, 75 mg, 90 mg, and 120 mg

<table>
<thead>
<tr>
<th><strong>Dosing interval</strong></th>
<th><strong>Once a day</strong></th>
</tr>
</thead>
</table>
| **Key instructions** | • Initial dose in opioid non-tolerant patients is 30 mg  
• Titrate in increments of not greater than 30 mg using a minimum of 3-4 d intervals  
• Swallow capsule whole (do not chew, crush, or dissolve)  
• May open capsule & sprinkle pellets on applesauce for patients who can reliably swallow without chewing; use immediately  
• MDD:* 1600 mg (renal toxicity of excipient, fumaric acid) |
| **Drug interactions** | • Alcoholic beverages or medications w/ alcohol may result in rapid release & absorption of potentially fatal dose  
• P-gp* inhibitors (e.g., quinidine) may increase absorption/exposure of morphine by ~2-fold |
| **Opioid-tolerant** | • 90 mg & 120 mg capsules for use in opioid-tolerant patients only |
| **Product-specific safety concerns** | • None |

* MDD=maximum daily dose; P-gp= P-glycoprotein
### Buprenorphine Buccal Film (Belbuca)

75 mcg, 150 mcg, 300 mcg, 450 mcg, 600 mcg, 750 mcg, and 900 mcg

#### Dosing interval

- Every 12 h (or once every 24 h for initiation in opioid naïve patients & patients taking less than 30 mg oral morphine sulfate eq)

#### Key instructions

- Opioid-naïve pts or pts taking <30 mg oral morphine sulfate eq: Initiate treatment with a 75 mcg buccal film, once daily, or if tolerated, every 12 h
  - Titrate to 150 mcg every 12 h no earlier than 4 d after initiation
  - Individual titration to a dose that provides adequate analgesia and minimizes adverse reaction should proceed in increments of 150 mcg every 12 h, no more frequently than every 4 d
- When converting from another opioid, first taper the current opioid to no more than 30 mg oral morphine sulfate eq/day prior to initiating Belbuca
  - If prior daily dose before taper was 30 mg to 89 mg oral morphine sulfate eq, initiate with 150 mcg dose every 12 h
  - If prior daily dose before taper was 90 mg to 160 mg oral morphine sulfate eq, initiate with 300 mcg dose every 12 h
  - Titration of the dose should proceed in increments of 150 mcg every 12 h, no more frequently than every 4 d
Buprenorphine Buccal Film (Belbuca) *continued*

# Buprenorphine Transdermal System (Butrans)

Transdermal System 5 mcg/hr, 7.5 mcg/hr, 10 mcg/hr, 15 mcg/hr, 20 mcg/hr

## Dosing interval
- One transdermal system every 7 d

## Key instructions
- Initial dose in opioid non-tolerant patients on <30 mg morphine equivalents & in mild-moderate hepatic impairment: 5 mcg/h
- When converting from 30 mg-80 mg morphine equivalents, first taper to 30 mg morphine equivalent, then initiate w/ 10 mcg/h
- Titrate in 5 or 10 mcg/h increments by using no more than 2 patches of the 5 or 10 mcg/h system(s) w/ minimum of 72 h prior between dose adjustments. Total dose from all patches should be ≤20 mcg/h
- Maximum dose: 20 mcg/h due to risk of QTc prolongation
- Application
  - Apply only to sites indicated in PI
  - Apply to intact/non-irritated skin
  - Prep skin by clipping hair; wash site w/ water only
  - Rotate application site (min 3 wks before reapply to same site)
  - Do not cut
- Avoid exposure to heat
- Dispose of patches: fold adhesive side together & flush down toilet
### Drug Interactions

- CYP3A4 inhibitors may increase buprenorphine levels
- CYP3A4 inducers may decrease buprenorphine levels
- Benzodiazepines may increase respiratory depression
- Class IA & III antiarrythmics, other potentially arrhythmogenic agents, may increase risk of QTc prolongation & torsade de pointe

### Opioid-tolerant

- 7.5 mcg/h, 10 mcg/h, 15 mcg/h, & 20 mcg/h for use in opioid-tolerant patients only

### Product-specific Safety Concerns

- QTc prolongation & torsade de pointe
- Hepatotoxicity
- Application site skin reactions

### Relative Potency: Oral Morphine

- Equipotency to oral morphine not established

Methadone Hydrochloride Tablets (Dolophine)

**Dosing interval**
- Every 8 to 12 h

**Key instructions**
- Initial dose in opioid non-tolerant patients: 2.5 – 10 mg
- Conversion of opioid-tolerant patients using equianalgesic tables can result in overdose & death. Use low doses according to table in full PI
- Titrate slowly with dose increases no more frequent than every 3-5 d. Because of high variability in methadone metabolism, some patients may require substantially longer periods between dose increases (up to 12 d).
- High inter-patient variability in absorption, metabolism, & relative analgesic potency
- Opioid detoxification or maintenance treatment only provided in a federally certified opioid (addiction) treatment program (CFR, Title 42, Sec 8)

**Drug interactions**
- Pharmacokinetic drug-drug interactions w/ methadone are complex
  - CYP 450 inducers may decrease methadone levels
  - CYP 450 inhibitors may increase methadone levels
  - Anti-retroviral agents have mixed effects on methadone levels
- Potentially arrhythmogenic agents may increase risk for QTc prolongation & torsade de pointe
- Benzodiazepines may increase respiratory depression
Fentanyl Transdermal System (Duragesic)

12, 25, 37.5*, 50, 62.5*, 75, 87.5*, and 100 mcg/hr
(*These strengths are available only in generic form)

                    • Dispose of used/unused patches: fold adhesive side together & flush down toilet |
# Fentanyl Transdermal System (Duragesic), continued

## Key instructions

### Specific contraindications:
- Patients who are not opioid-tolerant
- Management of:
  - Acute or intermittent pain, or patients who require opioid analgesia for a short time
  - Post-operative pain, out-patient, or day surgery
  - Mild pain

## Drug interactions

- CYP3A4 inhibitors may increase fentanyl exposure
- CYP3A4 inducers may decrease fentanyl exposure
- Discontinuation of concomitant CYP P450 3A4 inducer may increase fentanyl plasma concentration

## Opioid-tolerant

- All doses indicated for opioid-tolerant patients only

## Product-specific safety concerns

- Accidental exposure due to secondary exposure to unwashed/unclothed application site
- Increased drug exposure w/ increased core body temp or fever
- Bradycardia
- Application site skin reactions

## Relative potency: oral morphine

- See individual PI for conversion recommendations from prior opioid
Morphine Sulfate ER-Naltrexone (Embeda)

Capsules 20 mg/0.8 mg, 30 mg/1.2 mg, 50 mg/2 mg, 60 mg/2.4 mg, 80 mg, 3.2 mg, 100 mg/4 mg

Hydrocodone Bitartrate (Hysingla ER)

ER Tablets, 20 mg, 30 mg, 40 mg, 60 mg, 80 mg, 100 mg, 120mg

**Dosing interval**
- Once a day

**Key instructions**
- Opioid-naïve patients: initiate treatment with 20 mg orally once daily.
- During titration, adjust the dose in increments of 10 mg to 20 mg every 3 to 5 days until adequate analgesia is achieved.
- Swallow tablets whole (do not chew, crush, or dissolve).
- Consider use of an alternative analgesic in patients who have difficulty swallowing or have underlying gastrointestinal disorders that may predispose them to obstruction.
- Take one tablet at a time, with enough water to ensure complete swallowing immediately after placing in the mouth.
- Use 1/2 of the initial dose and monitor closely for adverse events, such as respiratory depression and sedation, when administering Hysingla ER to patients with severe hepatic impairment or patients with moderate to severe renal impairment.
**Drug interactions**

- CYP3A4 inhibitors may increase hydrocodone exposure.
- CYP3A4 inducers may decrease hydrocodone exposure.
- Concomitant use of Hysingla ER with strong laxatives (e.g., Lactulose) that rapidly increase GI motility may decrease hydrocodone absorption and result in decreased hydrocodone plasma levels.
- The use of MAO inhibitors or tricyclic antidepressants with Hysingla ER may increase the effect of either the antidepressant or Hysingla ER.

**Opioid-tolerant**

- A single dose ≥ 80 mg is only for use in opioid tolerant patients.

**Product-specific safety concerns**

- Use with caution in patients with difficulty swallowing the tablet or underlying gastrointestinal disorders that may predispose patients to obstruction.
- Esophageal obstruction, dysphagia, and choking have been reported with Hysingla ER.
- In nursing mothers, discontinue nursing or discontinue drug. QTc prolongation has been observed with Hysingla ER following daily doses of 160 mg.
- Avoid use in patients with congenital long QTc syndrome. This observation should be considered in making clinical decisions regarding patient monitoring when prescribing Hysingla ER in patients with congestive heart failure, bradyarrhythmias, electrolyte abnormalities, or who are taking medications that are known to prolong the QTc interval.
- In patients who develop QTc prolongation, consider reducing the dose.

**Relative potency: oral morphine**

- See individual PI for conversion recommendations from prior opioid
Morphine Sulfate (Kadian)

| Dosing interval | • Once a day or every 12 h |
| Key instructions | • PI recommends not using as first opioid |
| | • Titrate using minimum of 2-d intervals |
| | • Swallow capsules whole (do not chew, crush, or dissolve) |
| | • May open capsule & sprinkle pellets on applesauce for patients who can reliably swallow without chewing, use immediately |
| Drug interactions | • Alcoholic beverages or medications w/ alcohol may result in rapid release & absorption of potentially fatal dose of morphine |
| | • P-gp inhibitors (e.g., quinidine) may increase absorption/exposure of morphine by ~2-fold |
| Opioid-tolerant | • 100 mg, 130 mg, 150 mg, 200 mg capsules for use in opioid-tolerant patients only |
| Product-specific safety concerns | • None |
# Morphine Sulfate (MorphaBond)

## Tapentadol (Nucynta ER)

**ER Tablets 50 mg, 100 mg, 150 mg, 200 mg, 250 mg**

### Dosing interval
- Every 12 h

### Key instructions
- 50 mg every 12 h is initial dose in opioid non-tolerant patients
- Titrate by 50 mg increments using minimum of 3-d intervals
- MDD: 500 mg
- Swallow tablets whole (do not chew, crush, or dissolve)
- Take 1 tablet at a time w/ enough water to ensure complete swallowing immediately after placing in mouth
- Dose once/d in moderate hepatic impairment (100 mg/d max)
- Avoid use in severe hepatic & renal impairment

### Drug interactions
- Alcoholic beverages or medications w/ alcohol may result in rapid release & absorption of a potentially fatal dose of tapentadol
- Contraindicated in patients taking MAOIs

### Opioid-tolerant
- No product-specific considerations

### Product-specific safety concerns
- Risk of serotonin syndrome
- Angio-edema

### Relative potency: oral morphine
- Equipotency to oral morphine has not been established
### Oxymorphone Hydrochloride (Opana ER)

**ER Tablets 5 mg, 7.5 mg, 10 mg, 15 mg, 20 mg, 30 mg, 40 mg**

# Oxycodone Hydrochloride (OxyContin)

**ER Tablets 10mg, 15mg, 20mg, 30mg, 40mg, 60mg and 80 mg**

## Dosing interval
- Every 12 h

## Key instructions
- Initial dose in opioid-naïve and non-tolerant patients: 10 mg every 12 h
- Titrate using a minimum of 1-2 d intervals
- Hepatic impairment: start w/ ⅓-½ usual dosage
- Renal impairment ( creatinine clearance <60 mL/min): start w/ ½ usual dosage
- Consider other analgesics in patients w/ difficulty swallowing or underlying GI disorders that predispose to obstruction. Swallow tablets whole (do not chew, crush, or dissolve)
- Take 1 tablet at a time, w/ enough water to ensure complete swallowing immediately after placing in mouth

## Drug interactions
- CYP3A4 inhibitors may increase oxycodone exposure
- CYP3A4 inducers may decrease oxycodone exposure

## Opioid-tolerant
- For Adults: Single dose >40 mg or total daily dose >80 mg for use in opioid-tolerant patients only

## Product-specific safety concerns
- Choking, gagging, regurgitation, tablets stuck in throat, difficulty swallowing tablet
- Contraindicated in patients w/ GI obstruction

## Relative potency: oral morphine
- Approximately 2:1 oral morphine to oxycodone oral dose ratio
## Key instructions

### For Adults:
- Single dose greater than 40 mg or total daily dose greater than 80 mg are for use in adult patients in whom tolerance to an opioid of comparable tolerance has been established.
- When a dose increase is clinically indicated, the total daily oxycodone dose usually can be increased by 25% to 50% of the current dose.

### For Pediatric Patients (11 years and older):
- For use only in opioid tolerant pediatric patients already receiving and tolerating opioids for at least five (5) consecutive days with a minimum of 20 mg per day of oxycodone or its equivalent for at least 2 days immediately preceding dosing with Oxycodone ER. Renal impairment (creatinine clearance <60 mL/min): start w/ ½ usual dosage
- If needed, pediatric dose may be adjusted in 1 to 2 day intervals.
- When a dose increase is clinically indicated, the total daily oxycodone dose usually can be increased by 25% of the current daily dose.

## IMPORTANT:
- Opioids are rarely indicated or used to treat pediatric patients with chronic pain.
- The recent FDA approval for this oxycodone formulation was NOT intended to increase prescribing or use of this drug in pediatric pain treatment. Review the product information and adhere to best practices in the literature.
## Oxycodone Hydrochloride/Naloxone Hydrochloride (Targiniq ER)

**ER Tablets 10 mg/5mg, 20 mg/10mg, 40 mg/20mg**

### Dosing interval

- Every 12 h

### Key instructions

- Opioid-naïve patients: initiate treatment w/ 10mg/5mg every 12 h
- Titrate using min of 1-2 d intervals
- Do not exceed 80 mg/40 mg total daily dose (40 mg/20 mg q12h)
- May be taken w/ or without food
- Swallow whole. Do not chew, crush, split, or dissolve: this will release oxycodone (possible fatal overdose) & naloxone (possible withdrawal)
- Hepatic impairment: contraindicated in moderate-severe impairment. In patients w/ mild impairment, start w/ ⅓-½ usual dosage
- Renal impairment (creatinine clearance <60 mL/min): start w/ ½ usual dosage

### Drug interactions

- CYP3A4 inhibitors may increase oxycodone exposure
- CYP3A4 inducers may decrease oxycodone exposure

### Opioid-tolerant

- Single dose >40 mg/20 mg or total daily dose of 80 mg/40 mg for opioid-tolerant patients only

### Product-specific safety concerns

- Contraindicated in patients w/ moderate-severe hepatic impairment

### Relative potency: oral morphine

- See individual PI for conversion recommendations from prior opioids
Oxycodone Hydrochloride/Naltrexone Hydrochloride (Troxyca ER)

ER Capsules 10/1.2mg, 20/2.4mg, 30/3.6mg, 40/4.8mg, 60/7.2mg, 80/9.6mg

<table>
<thead>
<tr>
<th>Dosing interval</th>
<th>• Every 12 h</th>
</tr>
</thead>
</table>
| Key instructions| • Opioid-naïve & non-tolerant patient is 10/1.2mg, every 12h  
• Total daily dose may be adjusted by 20/2.4 mg every 2-3 d  
• Swallow capsules whole (do not chew, crush, or dissolve); possible fatal overdose, and naltrexone (possible withdrawal)  
• May open capsule & sprinkle pellets on applesauce for patients who can reliably swallow without chewing, use immediately  
• Do not administer through NG or G tube |
| Drug interactions| • CYP3A4 inhibitors may increase hydrocodone exposure  
• CYP3A4 inducers may decrease hydrocodone exposure |
| Opioid-tolerant | • Single dose >40/4.8mg or total daily dose >80/9.6mg for use in opioid-tolerant patients only |
| Product-specific safety concerns | • None |
| Relative potency: oral morphine | • See individual product information for conversion recommendations from prior opioid |
Hydrocodone Bitartrate (Vantrela ER)

ER/LA Opioids REMS Knowledge Test

1. Among the risk factors contained in screening tools for predicting aberrant drug-related behavior in patients receiving opioids for chronic pain are family and personal history of substance abuse, legal problems, history of preadolescent sexual abuse, psychological problems and
   A. Age (12-15 years)
   B. Age (16-45 years)
   C. Age (46-75 years)
   D. Age (≥ 76 years)
   E. Risk is even across age

2. Which of the following is most important to consider when determining a starting dosage of an extended-release/long-acting opioid?
   A. Calculation of equianalgesic dosage
   B. Presence of cross-tolerance
   C. Potential for adverse events
   D. Assessment of individual needs
   E. Starting dosage listed in the package insert

3. A 55-year-old man who is being treated for chronic low back pain after undergoing laminectomy comes for follow-up evaluation. A trial of oxycodone ER therapy is planned. Completion of which of the following is the most appropriate step before initiation of therapy?
   A. Oswestry Disability Index
   B. Roland Morris Disability Questionnaire
   C. Patient-Prescriber Agreement
   D. MRI of the lumbar spine
   E. Routine blood tests
ER/LA Opioids REMS Knowledge Test

4. A 63-year-old woman with a history of spinal stenosis and peripheral neuropathy secondary to breast cancer treatment comes for evaluation because of increasingly severe back pain. She reports that the pain started two weeks ago after doing yard work. She underwent chemotherapy 12 years ago. Medications include an opioid. Which of the following is the most appropriate next step?
   A. Assure the patient that the heightened sensitivity to pain is to be expected
   B. Reevaluate the underlying medical condition
   C. Refer the patient to physical therapy and administer a short-acting opioid as necessary
   D. Increase extended-release/long-acting opioid therapy dosage for up to one month
   E. Consider adding an adjuvant analgesic for neuropathic pain

5. Use of ER/LA opioids in pediatric patients <18 years of age deserves special consideration because
   A. Safety & effectiveness of most ER/LA opioids has not been established in this population
   B. Many children experience chronic pain conditions with indications for ER/LA opioids
   C. Starting doses of opioids are reduced by one-third to one-half that in adults
   D. Opioid risk screening tools have not been validated in this population
   E. Many state laws require consultation with a pediatric pain specialist or pain clinic

6. A 59 year-old with long-standing hypertension and Stage 3 chronic kidney disease continues treatment with disease-modifying anti-rheumatoid drugs (DMARDs) for rheumatoid arthritis (RA). Recently she has exhibited increasing pain and further functional decline likely due to progression of RA and osteoarthritis of the hips, knees and feet as well. She is determined to remain as functional as possible and participates in Aquatherapy and yoga classes. Which of the following pharmaceutical options is the best next step for addressing this patient’s pain?
   A. Acetaminophen 650 mg two tabs q 4 hours prn
   B. Duloxetine 20 mg daily
   C. Oxycodone IR 5 mg q 4 hours prn
   D. Morphine sulfate ER 15 mg q 8 hours
   E. Ibuprofen 600 mg q 4 hours prn
ER/LA Opioids REMS Knowledge Test

7. An **inappropriate** method to dispose of unused opioid medication is:
   A. Return the medication to a pharmacy
   B. DEA drug take-back event
   C. Dispose of medication in the regular trash
   D. Flush down the toilet

8. The most important reason a patient should be counseled to never break, cut, chew, or crush a ER/LA opioid tablet or cut or tear patches is because:
   A. The medicine will expire
   B. It is against the law
   C. The dose will be less than prescribed
   D. The patient may die

9. To avoid inadvertent overdose and death a patient should be counseled to avoid co-administration of an extended-release/long-acting opioid with which of the following?
   A. Alcohol
   B. Diphenhydramine
   C. St John's wort
   D. Aspirin
   E. Methamphetamine
10. Which of the following extended-release/long-acting opioids is most likely to induce a peak respiratory depression that occurs later and persists longer than the analgesic effect?
A. Fentanyl transdermal patch
B. Hydromorphone ER
C. Methadone
D. Oxycodone CR
E. Tapentadol ER

11. When using an equianalgesic table to rotate opioids (other than methadone), an important step to account for incomplete cross-tolerance among mu opioids includes:
A. Initiate the new opioid at the calculated equianalgesic dose
B. Increase the calculated equianalgesic dose by 10%-30%
C. Reduce calculated equianalgesic dose by 25-50%
D. Convert and total all opioids to oral morphine equivalents
E. Refer to the package insert for appropriate supplemental rescue dose
ER/LA Opioids REMS Knowledge Test

12. A 72 year-old grandfather with severe persistent abdominal pain from colon cancer has been taking an immediate release opioid every four hours around the clock. He and his wife care for their two young grandchildren, and he states that he can no longer help with their care due to his pain level. He wants to increase the dose of his medication and asks what else he might do to control the pain. Which of the following supports the addition of an ER/LA opioid as treatment for this patient?
   A. More consistent plasma concentrations
   B. Fewer adverse events
   C. Less risk for respiratory depression with the addition of the ER/LA opioid
   D. Less need for ongoing monitoring

13. A 67 year-old female with severe knee osteoarthritis has recently been converted from an immediate release opioid to an extended release opioid for pain control. She has chronic obstructive pulmonary disease that has made her a poor surgical candidate. In addition to extended release opioid, which second prescription would be the most appropriate to dispense to her?
   A. naloxone
   B. nortriptyline
   C. duloxetine
   D. acetaminophen

14. A positive result of hydromorphone of a urine drug toxicology test for a patient on prescribed morphine can be interpreted as
   A. Use of heroin in past month
   B. Proof of supplemental hydromorphone
   C. Presence of the oxycodone metabolite
   D. Presence of the morphine metabolite
   E. Presence of semisynthetic opioids
